ARIZONA CENTER FOR  
**Integrative Medicine**

This activity has been planned and implemented in accordance with the Essential Areas and policies of the Accreditation Council for Continuing Medical Education through the joint sponsorship of *CMEsolutions* and Arizona Center for Integrative Medicine. The *CMEsolutions* is accredited by the ACCME to provide continuing medical education for physicians.

# Why You Should Attend

Your patients increasingly call on your advice for diet and nutrition to promote good health and treat specific conditions. Proper diet is a fundamental building block to good health, yet many practitioners lack the basic expertise in nutrition to recommend dietary strategies to their patients.

To meet this growing need, this course will provide you with essential information on:

- *Practical strategies for incorporating nutrition into your clinical practice*
- *Using diet to prevent illness*
- *Nutritional recommendations for management of specific conditions*
- *Tools to evaluate the latest nutrition research findings*
- *Social and political aspects of diet and health*

The conference provides an overview and practical summary of the latest information on nutrition and health presented by leaders in scientific research, clinicians skilled in nutritional medicine, experts on food and agricultural policy, and innovative chefs.

## What You Will Learn

Upon conclusion of this conference, you will be able to:

- *Incorporate nutritional information into clinical practice and advise patients about eating for optimum health as well as using dietary change as a therapeutic intervention*
- *Evaluate the benefits and risks of nutritional recommendations for specific health conditions through an analysis of the existing scientific and clinical evidence*
- *Identify the health value of specific nutrients and protective phytochemicals and evaluate dietary supplements*
- *Describe the interaction between genes and diet and the health implications for different types of patients*
- *Describe current research on nutrition and cardiovascular health*
- *Analyze the social, political, and behavioral aspects of diet and health, the impact on obesity and diabetes, and implications for patient care*

## Acknowledgment

- *Gold: Vital Choice Wild Seafood & Organics*
- *Silver: Pure Encapsulations*
- *Silver: Smarty Pants*
- *Bronze: Host Defense Organic Mushrooms*
- *Bronze: Integrative Therapeutics*
- *Bronze: Natural Standard Research Collaboration*

**10<sup>TH</sup>** YEAR

# Educational Format

The conference format includes lectures with question-and-answer periods, panel discussions, and a variety of concurrent sessions. There are two major types of concurrent sessions: (1) those that address the nutritional needs of particular types of patients, designated by age, gender, or condition, and (2) those that discuss the health benefits or drawbacks of particular types of foods or nutrients.

# Learn by Experiencing Fabulous Food

*What would a nutrition conference be without great food?*

Exceptional meals and tasting breaks are included in the registration fee. Everything served will be designed for participants to experience and taste a unique selection of organic and healthy foods that complement the health and nutrition themes of the conference. Menus are planned with the advice of Rebecca Katz, consulting chef to the conference.

# Practice Gap & Needs Assessment

Nutrition is one of the major influences on health and longevity, but physicians and other health professionals are rarely educated in this area. They are often unaware of the latest scientific findings on diet and health and are therefore poorly prepared to advise their patients about designing a diet for optimal well being or using dietary change for management of disease.

This conference will provide an overview of the latest information on nutrition and health, including practical strategies for incorporating nutrition into clinical practice, using diet to prevent illness, nutritional recommendations for management of specific conditions, and tools to evaluate the latest nutrition research findings. The conference is designed for physicians, dietitians, nutritionists, nurses, personal chefs, pharmacists, naturopaths, and other professionals who make nutritional recommendations as part of their professional practices.

The topic and program for this conference were developed by an advisory group based on feedback from participants in the 2004-2012 Nutrition & Health conferences, data collected from clinicians who have taken part in Arizona Center for Integrative Medicine nutrition modules, literature fostering effective nutrition counseling by practitioners, and documentation of increased demand for nutrition education for health care professionals, as clearly demonstrated by the overwhelming success of the previous nine conferences.
